About TurnB

TurnB is a leading provider of business analytics, consulting, and AI solutions, helping businesses unlock actionable insights and drive data-led transformation. We combine cutting edge technology with strategic expertise to deliver business impact for our clients. With deep experience in AI-driven data analytics and advanced business intelligence, we help organizations solve complex business challenges and accelerate growth.

About the Job

We are seeking a passionate and experienced Analytics Consultant (AI) who is eager to learn and grow in the field of data-driven consulting. The candidate should be experienced and driven, who has hands-on expertise in building, deploying, and maintaining enterprise-grade AI and Agentic AI applications. The role requires strong analytical capabilities, a solution-oriented mindset, and the ability to independently contribute to client engagements while collaborating effectively within a team. A curiosity-driven mindset, strong problem-solving skills, and effective communication are key for success in this role.

We expect our prospective candidates to possess the following qualities and strengths:

- Experience in AI/ML development
- Model deployment and monitoring
- Cloud-based solution implementation
- Solid programming experience in Python, including production-level coding and debugging.
- Learning is everything attitude
- Excellent Communication skills

Job Responsibilities

- End-to-end involvement in AI/ML solution development — from requirement understanding to deployment and support.
- Enhance and optimize existing solutions to improve scalability, reliability, and performance.
- Partner closely with project managers, senior consultants, and customers to
- Translate business needs into analytical solutions
- Provide data-driven insights and recommendations
- Deliver high-quality solutions within timelines
- Conduct structured data analysis, feature engineering, and model evaluation.
- Document solution design, workflows, and performance outcomes.
- Stay updated on the latest trends in AI, Agentic AI, and cloud technology to contribute thought leadership within the team.
- Act as a subject matter expert for the team in designing and recommending appropriate analytical approaches and methodology in addressing key data/business issues.

Technical Skills

Strong understanding of:

- Machine Learning algorithms & workflows
- Model lifecycle management
- Version control using Git

Professional exposure to Azure or AWS, with hands-on experience in services such as:

- Azure ML
- Azure AI Foundry
- Microsoft Fabric
- Copilot Studio

Knowledge of data ingestion, API-based integrations, and MLOps is a plus.
